

Overview of Update 2026-7

Hi all,

NEW! Academic Reports - new Summation Summary screen

Designed especially for users who review or proofread Summation comments, our new screen is school-configurable to surface the comment fields you need.

Medical Centre - further enhancement

We've added a "Treated By" field so schools can clearly specify who the treating staff member was in a Sickbay event.

Coming soon - Carer Orbit Update - Update My Details

We're in final testing of our new update for Carer Orbit. Fully featured Update My Details for Carer on the app is on the way, along with several other requested refinements.

Read below for the details of what's in this release.

Released Items

EDU-17983: Academic Reports - new Summation Summary screen (7.0)

This new screen is part of Summation Reports List and enables users to view and edit Summation comments for a list of students, without changing screens. Perfect for Year Co-ordinators or report proofreaders.

These is some HTML template construction required. Refer to [Edumate Community>Help Articles>Academic Reporting>Summation Summary Screen for instructions.](#)

EDU-18382: Medical Centre - Sickbay: "Treated by" (7.0)

Following more user feedback (thanks!) we've added "Treated By" as a new field in Sickbay records. This is distinct from who CREATED the record, or who LAST UPDATED the record. Choose from a list of current staff.

Search Staff
Meadow Ausberry

You must nominate a "Treated By" contact before leaving the Sickbay record screen.

The Sickbay Register and .csv export now shows "Treated By".

The Sickbay Today list shows "Last Updated".

EDU-15624: Academic Reports audit improvements (6.1, 7.0)

We now fully audit changes made to a course report when these are made via the Summation Reports Course Preview section (at the bottom of the Summation Details page).

EDU-18099: Welfare Automations - ignore PAST items when a new automation is established (7.0)

Fixed an issue where the logic for a new welfare automation created may have included past welfare items in its initial counts. New automations now only include future welfare items when doing counts and applying rules.

EDU-18312: Markbook hardening - multilinear mapping (7.0)

Prevented an error that occurs when a user selects Multilinear mapping, but then adds no mapping points.

EDU-18376: Edit Timetable - cannot change teacher of a timetabled class (7.0)

Fixed.

EDU-18475: Welfare Register - amend definition of status "Approved"

Users expect that when the Welfare Register opens, what will be listed are awards/disciplines that have actually been given to the student/s. This should exclude items given that require approval and the approval for the item was rejected.

To achieve this, we have amended the definition of the default opening state: APPROVED.

APPROVED now means: **items which require approval where approval was granted AND items where no approval is required.** It excludes REJECTED items and PENDING items.

Major Carer Orbit Update - almost here!

Due to be released in the next few weeks, the new work brings with it the following new features:

Update My Details in Carer Orbit!

Media Permissions - School configures the categories for media permissions, Carer can respond via Update My Details in Carer Orbit.

Event Transport - ability to have event-level transport options, selected from a master list by the school. Each event can have different options.

Event Permissions option - require confirmation of Medical Information by Carers for select events. Handled by a flag on the event record and completed by Carer in Orbit App using Update my Details.

Space & Broadcast Posts list view (Orbit Newsfeed) - the first **attached** image in a post is used as a thumbnail in the Orbit Newsfeed, when present.

Space and Broadcasts Posts - embedded Youtube videos working again (no thanks, Youtube!).

Absence in advance - school set optional max limit for consecutive days that can be requested via App + custom message + link.

New Orbit App Setup screen - improved, safe access to Orbit look and feel settings by Admin staff, without exposing technical settings.

Orbit App Setup screen - provide a Homescreen preview of styling being applied.

We'll be releasing this as soon as possible, so keep an eye out for a notification from us soon.

Released to...

Edumate (6.1), 7.0. 20 July 2026. NOTE: We are phasing out support for Edumate 6.1 in July 2026.
