

Overview of Update 2026-9

Hi all,

NEW! Attendance Signin/Signout Screen

Featuring our new look and feel, the new sign-in/sign-out screen offers several new high-value features and enhancements we're sure Attendance Clerks will love!

For all the news, click [HERE](#).

Edumate Community>Help Articles>Attendance>Signin/Signout (new) Guide

Next to be released

- **Canvas Sync II - Tasks and Results** - for schools using Canvas, you can create Coursework Tasks in Edumate and synchronise them to Canvas. The student completes the task in Canvas, the teacher marks the task in Canvas and the released results are synced back to Edumate - ready for archiving, use in analytics, academic reporting and progressive reporting. Due for a special release in the next 2 weeks!
- **AI-driven ACL Explainer** - an important enhancement that helps you have certainty about the accuracy of assigned Edumate Permissions across your users. This feature uses an Edumate-authored reference file along with agentic AI to summarise the ACLS provided, indicate possible problems and errors and provide advice on best practice. Advice is based on the Edumate Default ACL Framework and ACL pattern that many of you use, which we highly recommend.
- **User "Masquerade" for admins** - ACL Explainer also contains a full user "Masquerade As" feature which you (and we) can use to see exactly what a specific user can see - great for troubleshooting and ACL outcome checking. Masquerade As is secure: the feature is behind a new ACL assigned by the school; it is also fully audited.

Read below for the details of what else is in this release. Also, check out Development Corner - we have great other new features also on the way!

Released Items

EDU-18446: Task Results API - return SCALED marks where these are set

Where a school sets scaling for task results, the scaled marks are now provided in the Analytics and Orbit app task-results endpoints.

EDU-18362: Mark Roll Scan - fix "Complete Roll" logic

Fixed a problem where the Complete Roll flag was not being stored correctly from the Mark Roll Scan screen.

EDU-18312: Markbook - Multilinear Mapping hardening

Prevented an error appearing when a user chooses multilinear mapping, but does not set any mapping points. The screen and request now revert silently.

EDU-18160: Edval/Atlantis sync - restore error detail to user

A byproduct of the increased security posture of Edumate 7 was that our existing (many) error messages relating to timetable sync problems were being partially suppressed by the system. We have completed a new way to bring the errors back to you.

EDU-16236: Process Automatic Payments - add a single debtor bug

Fixed a problem on Process Automatic Payments screen - when a single debtor was added after a group had been added, the single debtor always appeared RED (indicating no bank details), even if bank details did exist. Now fixed.

EDU-18274: Unmarked Roll automated email

Following customer requests, now the automated unmarked Roll email will go to ALL teachers listed on the Classes screen. not just the timetable teacher on the day.

Product Development Corner

Agentic AI coming for Edumate

We're currently working on projects that will bring agentic AI safely into Edumate - to analyse data and make recommendations, and to assist with complex technical tasks:

- **Academic Reports: Student course inclusion/exclusion console and Proofing Tool**
- These new tools will simplify the initial setup then finalisation of Academic Reports:
 - identify students registered in two classes within a course - do this before opening the report period;
 - identify students who have left the school - do this before opening the report period;
 - look for incomplete/empty data in each student's Academic Report – do this just before printing.
- **Case Management System** - a complete management system with AI smarts to make recommendations for complex and critical/high risk incidents and cases - bullying, WHS, complaints, legal threats. Bring a solid school-defined workflow, issue detection, documentation and audit, participant actions and accountability into these areas.

We'll be talking about and publishing more details about these as the projects continue towards release. If you want to know more now, contact greg.collins@edumate.com.au or call 0438 341 870.

Released to...

Edumate 7.0. 09 September 2026.
